**Georgia: Its Heritage and Its Promise**

**Chapter 25: Modern Georgia's Changing Politics**

*Internet Activity*

The Constitution of the United States requires that a census be conducted every ten years. This count determines how many representatives each state will have in Congress. The count also gives us a look at trends in the country, such as changes in groups and the population as a whole. In this activity, you will use data to create graphs showing changes in the population of Georgia in the last half of the 20<sup>th</sup> century.

**Instructions:** Use the information from the link below to find information to create graphs.

[United States Census Data: Georgia](#)

**Part I: Finding the Facts**

Take a moment to see how the data are organized. You will notice years at the top of columns, with each row standing for the national, state, or county population. The most recent data are at the top of the webpage.

1. What was the population of Georgia in 1990? \_\_\_\_\_
2. What was the population of Georgia in 1940? \_\_\_\_\_
3. By how much did Georgia's population change between 1940 and 1990?  
\_\_\_\_\_
4. Let's see what that looks like as a percentage increase. (Hint: use this equation: (population in 1990 – population in 1940) ÷ population in 1940) x 100 = \_\_\_\_\_
5. Use the same process to calculate the percent increase in population of the United States during the same period and record that information.  
\_\_\_\_\_
6. In a sentence, compare the population trend of the U.S. with that of Georgia during this time period.  
\_\_\_\_\_

7. Complete the table with population data about Georgia using information from the website.

<i>Year</i>	<i>Population</i>
<b>1940</b>	
<b>1950</b>	
<b>1960</b>	
<b>1970</b>	
<b>1980</b>	
<b>1990</b>	

**Georgia: Its Heritage and Its Promise****Chapter 25: Modern Georgia's Changing Politics***Internet Activity***Part II: Creating a Graph**

These directions will help you create a graph using a Windows-based computer and Microsoft Excel 2007. If you have another spreadsheet program, the steps will be similar.

1. Launch your spreadsheet program, Microsoft Excel, and make sure that you are on a new, blank spreadsheet.
2. In cell A1, type "Year."
3. In cell B1, type "Population."
4. Using the information on the website, enter the population for Georgia for each decade from 1940 to 1990.
5. Now, have the computer take these data and make a graph. Click on cell B1 and without releasing the mouse, drag down to cell B7. This should highlight all of your population data.
6. Click **Insert** tab and from the **Charts** group, choose **Line**. Choose one of the line graph types.
7. Click the area of the horizontal axis labels (which now simply say 1, 2, 3, etc.) to select it. Then, right-click it and choose **Select Data**.
8. In the window that opens, click the **Edit** button under **Horizontal (Category) Axis Labels**.
9. Now, click cell A2, hold the mouse button down, and drag down to cell A7 to select your list of years. Click **OK**.
10. Click **OK**.
11. Edit your title, as needed, by double-clicking on the title and adding a more complete title.

	A1	
	A	B
1	Year	Population
2	1940	1901
3	1950	2005
4	1960	1860
5	1970	1744
6	1980	1949
7	1990	1793
8		

Click the graph to select it, and then use your **print command** to print your graph. Be sure to preview the graph before printing to make sure that you are printing the correct part of your work.

**Part III:** Use the directions that you just followed to create another graph. This time, create a graph for the county where you live in Georgia. Print a copy of the completed graph and staple it to this activity sheet.

**Part IV:** Use the [U.S. Census Bureau American FactFinder](http://www.census.gov) website to find information that could answer a question about changes in Georgia's population from 2000 to the most recent data. For instance, how has the number of Hispanic people changed in Georgia from 2000 to the present? Create a graph that provides an answer to your question.
